

### Polyethylene Pressure Pipe 20mm to 63mmOD

#### 20mm to 63mm Pipe Applications

**Blue MDPE** pipes 20mm to 63mm to BS EN 12201 are used for Potable Water Underground as service connections from distribution mains to individual properties and are connected using Polypipe Polyfast compression fittings or electro-fusion fittings. Blue pipes may also be used for above ground services if the pipes are installed within protective ducts.

**Black MDPE** pipes 20mm to 63mm to BS EN 12201 are used for Potable Water Above Ground and are connected using Polyfast compression fittings or electro-fusion fittings.

Polypipe MDPE pipe systems should be used for the conveyance of potable water only and should not be used for transporting gases, oil, petrol, diesel or compressed air.

Polypipe MDPE pipe systems are suitable for use with cold water (maximum temperature 20°C) with a working pressure of up to 12.5 bar.
